nunki.usc.edu(1): cd ee450/socket_project
nunki.usc.edu(2): ./serverA

The Server A is up and running.

The Server A has the following neighbor information:
Neighbor------Cost
severB         20
severC         10

The Server A finishes sending its neighbor information to the Client with TCP port number 25646 and IP address 68.181.201.3.

For this connection with the Client, the Server A has TCP port number 51345 and IP address 68.181.201.3.

The server A has received the network topology from the Client with UDP port number 39103 and IP address 68.181.201.3 as follows:
Edge------Cost
AB         20
AC         10
BC         30
BD         15

For this connection with Client, the Server A has UDP port number 21646 and IP address 68.181.201.3.
